SUMMARY

Software Engineer specializing in agentic AI: production LLM-powered systems with tool use, RAG, multi-model orchestration, and the evaluation layer that makes them reliable. Full-stack foundation in Python, TypeScript, and React, with a track record of shipping real, deployed systems and moving fast in startup environments.

TECHNICAL SKILLS

Programming Languages: Python, TypeScript, JavaScript, Go, Java, C++, C#, SQL
Agentic AI & LLMs: LLM orchestration, agentic pipelines, tool use / function calling, RAG, prompt engineering, structured outputs, multi-model routing, LLM evaluation & benchmarking, Claude API, OpenAI API, Gemini
Frameworks & Tools: React, Next.js, Node.js, Express, Flask, FastAPI, Tailwind, shadcn/ui, REST APIs, JWT Auth, Docker, Modal, AWS
Databases: PostgreSQL, Supabase, MongoDB, SQLite, Kysely
Practices: Agile, CI/CD, integration testing (Vitest), Google OAuth, serverless deployment

EXPERIENCE

Accmatica — AI-Powered Accounting Platform (Startup) **Remote**
TypeScript, Node.js, PostgreSQL/Supabase, React, Claude API, agentic pipeline, text-to-SQL *May 2026 - Present*

- Built a production-grade, multi-tenant accounting platform (modeled on QuickBooks Online) with an autonomous AI document pipeline: client emails are polled via the Gmail API, a single Claude call classifies each PDF (invoice vs. bank statement, AP vs. AR) and extracts structured data, which routes to a human-review queue before posting to a fully audited double-entry ledger.
- Engineered the platform across **954 commits, 122 database migrations, and 164 test files** run against a real Postgres test database, with role-based access control (5 roles, enforced server-side) and tenant isolation. Every module posts through one journal-entry service, so **60+ financial reports** tie out automatically.
- Built a guardrailed text-to-SQL assistant that lets accountants query a client's financials in natural language, with the LLM generating read-only SQL behind multiple safety layers (allow-listed tables, enforced READ ONLY transactions, parameterized business-id binding, query timeout, row cap).
- Built a custom LLM benchmarking harness comparing Claude and Gemini models on real invoices across accuracy, latency, and cost, identifying a configuration that matched frontier accuracy at **~80x lower cost** and catching a silent AP/AR misclassification in a cheaper model.

Magic Notes AI (Startup) Remote
Backend Software Engineering Intern | AI Integration Specialist *Sept 2025 - Dec 2025*

- Built an automated patient-intake system using Python, Flask, and the Claude API to generate follow-up questionnaires from clinical SOAP notes, saving healthcare workers **8+ hours weekly** on a HIPAA-compliant platform.
- Engineered a production REST API integrating Supabase PostgreSQL with multiple LLM models, processing **100+ patient** appointments daily, deployed to Heroku/Render with Row-Level Security and robust error handling.
- Collaborated with frontend and backend engineers in an agile startup to rapidly ship features for a nationwide platform serving social workers, therapists, and case managers.

Freelance Front-End Developer Tampa, FL
Independent Contractor *Aug 2024 - May 2025*

- Built responsive web applications with React, Next.js, and Tailwind CSS for clients, engineering reusable components with performance optimizations (lazy loading, image compression) that reduced load times by up to **3 seconds.**

PROJECTS

ReAct Agent API *October 2026*
Python, Anthropic API, FastAPI, Docker, Render

- Built a from-scratch ReAct agent (reason-act-observe loop, tool use, no framework) and deployed it as a live public API: FastAPI service, containerized with Docker, deployed on Render, with input validation, a turn-limit safety cap, and clean error handling that keeps internals out of responses.

Newsletter Automation Pipeline *June 2026*
Python, Claude API, Perplexity API, Kie.ai, Gmail API, Modal

- Built an end-to-end agentic pipeline that researches a topic, generates AI infographics, assembles branded HTML, and delivers to a subscriber list, triggered by a single command or weekly cron job.
- Deployed serverlessly on Modal with a web trigger and weekly schedule, eliminating all manual steps from topic ideation to inbox delivery.

LLM Routing & Evaluation Study *June 2026*
Python, Claude, Gemini, Qwen, DeepSeek, LLM evaluation, benchmarking

- Benchmarked **six frontier and budget LLMs** on messy real-world business data, scoring each against a ground-truth answer key across data-quality handling, accuracy, and cost, surfacing a hidden pricing trap most models missed and one model that returned no usable output.

EDUCATION

University of South Florida *Tampa, FL*
B.S. in Computer Science - GPA: 3.65 *May 2026*
